## AMENDMENTS

**In the claims:**

1. (Amended) A remote display device for remote interaction by a user with a main computer, the main computer being in communication with a main transmitter and a main receiver, the main computer featuring a local video card, a video compressor communicating with said local video card and [the main computer featuring] a local input port for receiving input instructions, the device comprising:

- (a) a remote display device for receiving compressed display signals directly from the local video card through the main transmitter and for displaying a display to the user, said remote display device featuring a remote receiver for *direct* receiving said compressed display signals; and

not through a network

not through a network  
directly from a display  
or directly
